

Fast, reliable wireless LTE internet service ensures your communications and e-commerce never go down.

In 2020, businesses across the U.S. are seeing 30-80% jumps in online sales transactions. But approximately 7 million small and mid-sized businesses are still using old, slow, expensive DSL, which can put them at a disadvantage.

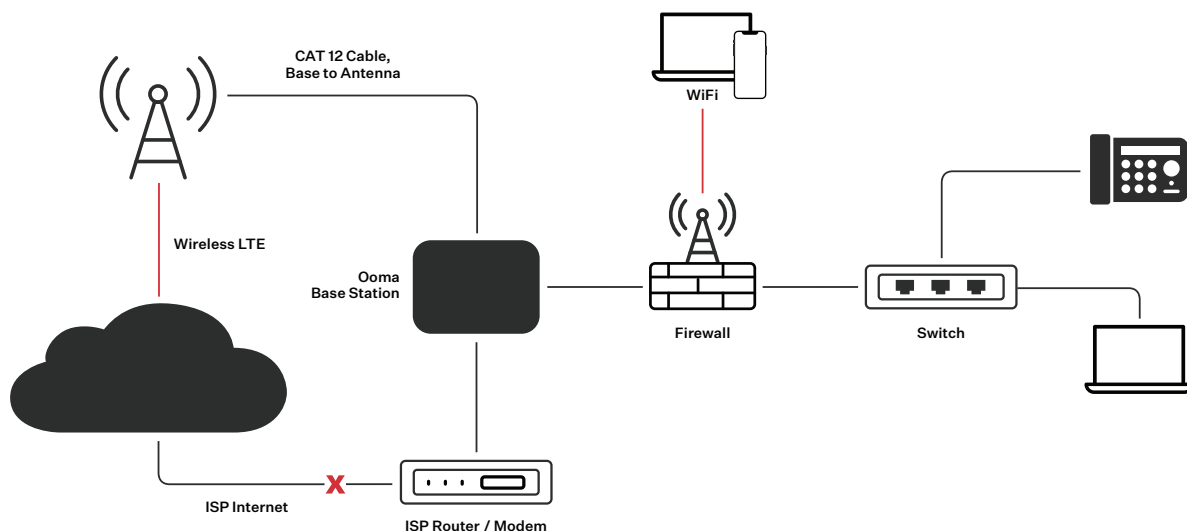

Now there's a better option using Wireless LTE technology. Businesses enjoy fast, reliable Internet connectivity that keeps their orders flowing and their business running.

Ooma Connect is a great option for primary internet connectivity where DSL used to be the only solution available. It has been a life saver for businesses that:

- Have no other options than slow, expensive DSL
- Recently moved to or opened a new location, but cable or DSL connectivity options would take weeks or sometimes months for availability and set up.

Ooma Connect consists of a Base Station and Antenna and it is paired with the #1 VoIP business phone solution, Ooma Enterprise. Customers can choose from various data packages that are usually more affordable than DSL.

This use case illustrates how Ooma Connect works to bring better speeds and reliability to your business.

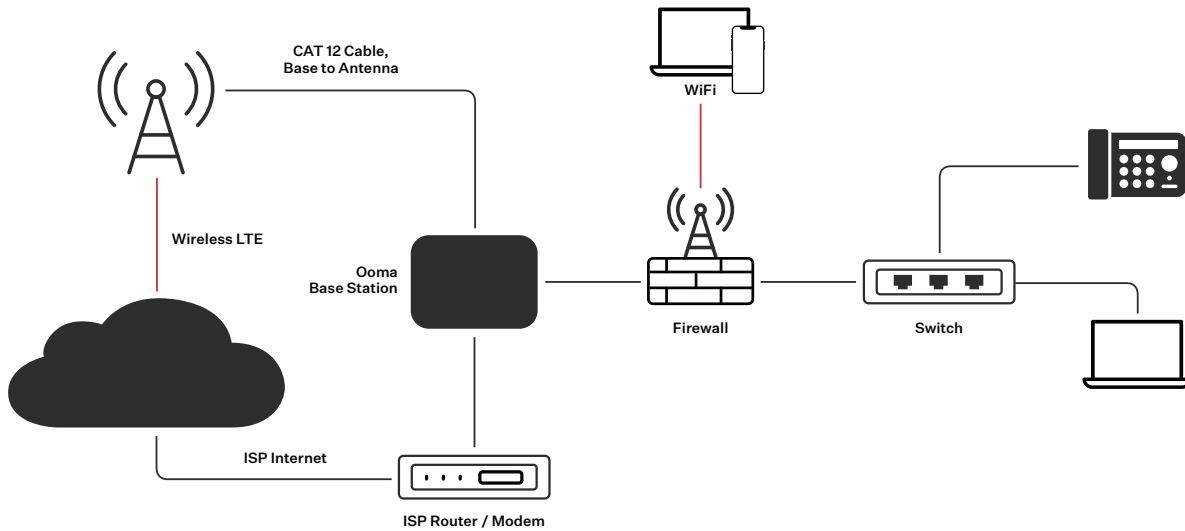

Fast, reliable primary Internet

The Ooma Connect base station and antenna connect directly to a high speed LTE network to provide reliable Internet connectivity to your IP phones, desktop computers, as well as Wi-Fi for PCs and smartphones.

Get Crystal Clear Voice Quality with No Outages.

Whether you operate a retail store, café, manufacturing or professional services business, Ooma Enterprise provides a new option for a better experience. As an example, a retail chain or pizza franchise benefit from having Ooma Connect in each store for “always on” communications and ordering capabilities during business and non-business hours. Never miss a voicemail or online order again when you have strengthened and top quality unified communications, including business VoIP, messaging, meetings, and flexible call center capabilities. Continuous Voice reduces latency and jitter by sending voice traffic via your ISP AND Ooma’s LTE Network Simultaneously. Ooma automatically sends the packets over the fastest path.

Reliable back-up Internet

Ooma Connect can also be used as a back-up solution so your Internet never goes down. It is connected to your current provider’s modem. If it detects any connectivity hiccups or failures, it instantly re-routes your connection to the cloud LTE network to maintain reliable connectivity. It constantly monitors and optimizes Internet connectivity paths so you always have the best speed and overall experience possible.

Ooma Enterprise

Collaborate. Share. Connect.

Video meetings, softphones, desk phones, and mobile apps. Each endpoint is customized to fit the needs of all your users.

Customizable. Flexible. Scalable.

Forget about being force fed cookie-cutter solutions. We’ll do tailored integrations that perfectly fit your business.

Network Security. Redundancy. Reliability.

Our network provides unparalleled voice quality which connects our users across the shortest distances between 7 global POPs.
